For hydraulic cleaning of a fan drift a special pipe is
led off the surface fire-fighting main and carried along
the entire length of the drift, valves being fitted at 10
metre intervals. A fire hose connected to each nut is
equipped with pumps, the number of which depends on
the length of the fan drift and the volume of settled
dust. When the fan is not in operation (roughly once
every fortnight) a jet of water at a pressure of 10-16
